A Toribara N.W., Guu J.R. Jr., Culhane P.J., Lagace R.E., Hicks J.W., R. W.C.-2 human small intestinal mucin gene structure. Repeated arrays and polymorphism.", Calin. Invest. 88:1005-1013(1991).

I. Clin. Invest. 88:1005-1013(1991).

I. FUNCTION: Coats the epithelia of the intestines, airways, and other mucus membrane-containing organs. Thought to provide a protective, lubricating barrier against particles and infectious of the mucosal surfaces.

SUBUNIT: Multimeric.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR LOCATION: Secreted.

I. TISSUE SPECIFICITY: Colon. Small intestine, colonic tumors, bronchus, cervix and gall bladder.

Interchain disulfide bonds (By similarity).

I. POLYMORPHISM: The number of repeats is highly polymorphic and interchain disulfide bonds (By similarity).

I. SIMILARITY: Contains 1 TiL (Trypsin inhibitory-like) domain.

I. SIMILARITY: Contains 2 VWFC domains.

cancer, exposure to radiation or drugs, bacterial and viral for treating immune ocyte stimulating factors infections, etc. deficiencies,

Gesner IG;

Hewick RM,

Claim 1, 2 and 3; Fig 1; 87pp; English.

The sequence given is a full length translation from the megakaryocyte stimulating factor (MSF) precursor. The sequence covered by exons II, III and I be encodeds megakaryocyte stimulating factor (MSF). This sequence is modified by the addition of an N-terminal sequence encoding a secretory codon following exon IV. The cDMA sequence given contains a sequences of codon following exon IV. The cDMA sequence given contains sequences of codon following exon IV. The cDMA sequence given contains sequences from I contains the initiating methionine, and encodes a classical exon I contains the initiating methionine, and encodes a classical corriginal meg-GSF includes exons II-IV and is thought to terminate in the region between amino acid residues 134 - 147. The primary transcript of this gene may be cleaved in different ways to yield a family of mRNA's cach encoding a different MSF protein. Exons V and VI are thought to be each encoding and inferent MSF protein. Exons V and VI are thought to be stability, folding and processing of the molecule. These exons are also chought to play a role in the observed synesyp of MSF with other cytokines. Exons V - XII are believed to be implicated in the processing or folding of the appropriate structure of the resulting factor, ie. one contain sequences which direct proteolylical contains sequences which direct proteolylical contains expensed to be implicated in the processing or more of these exons may contain sequences which direct proteolylical contains expensed to be implicated in the processing of manner and an expense exone may contain sequences which direct proteolylical contains expensed to be implied to the contains expense exone and the contains expense exone exception of the lange exone may contain sequences which direct proteolylical expenses exone exceptions. cleavage, adhesion, organisation of the cellular matrix or extracellular matrix processing. Both naturally occuring and non-naturally occuring MSF's may be characterised by various combinations of alternatively spliced exons from this sequence, with the exons spliced together in differing orders to form different members of the MSF family. (Updated on 25-MAR-2003 to correct PN field.)

```
The invention relates to a human tribonectin which is a product of alternative splicing of the human MSF (megakaryocyte stimulating factor) calternative splicing of the human MSF (megakaryocyte stimulating factor) gene. The tribonectin has at least one 0-linked oligosaccharide lubricating moiety and has a polypeptide sequence comprising 1-76 repeats of a motif having at least 50% identity to the sequence KEPAFTT of ABASPTA). The invention also relates to a mucleic acid encoding a human MSF-derived tribonectin; a biocompatible composition comprising a human tribonectin for inhibiting tissue adhesion formation; and a method of tribonectin of MSF or its fragment in a biological sample of a mammal, wherein an increased amount of MSF compared to a control mammal, wherein and DNA encoding it are useful in the treatment of the tribonectin and DNA encoding it are useful in the treatment of such as articulating joints of humans, dogs or horses. The tribonectin, when formulated as a membrane, foam, gel or fibre, is useful for inhibiting adhesion between two surfaces such as the injured tissues of a mammal, where the injury is caused by a surgical insertion or trauma, or

administration of a composition comprising the camptodactyly-arthropathycoxa vara-pericarditis (CACP) protein, or portions of the CACP protein.

The composition may further comprise a local annestheric. The composition of the invention may be administered via intra-articular or intravenous injection. The human CACP protein is identified in the invention as being CC megakaryozyte stimulating factor (MSF). The game encoding CACP protein (MSF) is located on chromosome 1q20-31, and mutations in this gene are responsible for the heritable disorder camptodactyly- arthropathy-coxa vara-pericarditis, in which patients have synovial hyperplasia without cerificant, and can be used to lubricate tissue and joints in the special conferont of osteoarthritis. The composition may be applied to reduce the symptoms of osteoarthritis (e.g., joint pain, loss of range of movement or joint damage). The present sequence represents human megakaryocyte stimulating factor (MSF, CACP protein). Note: This sequence is not given in its entirety in figure 4 of the specification, although a GenBank accession number was given.                                                                                                                                                                                                                                                         09
                   The invention relates to a lubricating polypeptide and at least one O-linked oligosaccharide. The composition and methods are useful for lubricating joints or other tissues to prevent or treat camptodactylarthropathy perioarditis (CAP) or osteoarthritis in mammals. The present sequence represents the amino acid sequence of the human megakaryocyte stimulating factor (MSF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PEBBAPTTPKAAAPNTPKEPAPTTPKEPAPTTPKEPAPTTPKETAPTTPKGTAPTTLKEP

The invention relates to novel human secreted polypeptides. The polypeptides are useful for determining the presence of or predisposition to a disease associated determining the presence of or predisposition to a disease associated with alreard levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapoutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis, and in bone, cartilage, tendon stimulation; as anti-inflammanchy agents; and in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          106

                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of determining the angiogenic index of a tissue or cell sample comprising assessing, in a sample, the expression levels of one or more differentially-expressed gene from any of 34 DNA sequences, given in the specification, where the levels are indicative of the angiogenic index. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary artery areas they can also be used in research, drug discovery and forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         106

UK, Swarnakar A, Marquis JP; , Lindquist EA, Chawla NK, Ramkumar Richardson TW, Emerling Lee SY;

2004-157116/15. N-PSDB; ADK67916. New extracellular messengers and nucleic acids, useful for diagnosing, tracting or preventing e.g. allergies, anemia, Crohn's disease, diabetes mellitus, myasthenia gravis, osteoporosis, psoriasis, cancers or autoimmune thyroiditis.

Claim 59; SEQ ID NO 4; 165pp; English.

The present sequence is that of novel human extracellular messenger
(EXMES) Incyte ID NO: 7513017CD1 polypeptide. The protein shows homology
to human megakaryocyte stimulating factor. The invention provides EXMES
polymucleotides and polypeptides, as well as expression vectors, host
cells, antibodies, agonists and antagonists, and methods for diagnosing,
treating or preventing disorders associated with aberrant expression of
EXMES, especially autoimmune and inflammatory disorders, cell
proliferative disorders and endocrine disorders, e.g. adult respiratory
distress syndrome, allergy, anaemia, erythroblastosis foetalis,
clistass, diabetes mellitus, myasthenia gravis, osteoarthriis,
osteoporosis, pancreatitis, psoriasis, viral, bacterial, fungal,
parasitic, protozoal or helminthic infections, cancers, autoimmune
thyroiditis, cretinism, Plummer's disease or thyroid carcinoma.
Chyroiditis, cretinism, Plummer's disease or thyroid carcinoma
their encoding polymucleotides for using the purified EXMESs and/or
their encoding polymucleotides for facilitating the drug discovery
process, including determining of efficacy, dosage, toxicity and
madian control or control or paramial or control or carcinomal characterial or control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial control or carcinomal characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial characterial pharmacology, and functional medical

The invention relates to a method of determining the anglogenic index of a tissue or cell sample comprising assessing, in a sample, the expression levels of one or more differentially-expressed gene from any of 34 DNA sequences, given in the specification, where the levels are indicative of the anglogenic index. The methods and compositions of the present invention are useful for diagnosing preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary artery disease, mocardial ischemia or coronary artery disease, myocardial ischemia or coronary forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.
                                                                                                                                                                             1159

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTE from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 20; Page 1198-1201; 1275pp; English.

The invention relates to a human tribonectin which is a product of alternative splicing of the human MSF (megakaryocyte stimulating factor) calternative splicing of the human MSF (megakaryocyte stimulating factor) can the tribonectin has at least one 0-linked oligosaccharide comprising in the tribonectin an polypeptide sequence comprising 1-76 repeats of a motif harving at least 50% identity to the sequence KEPAPTT of ARAB2974). The invention also relates to a nucleic acid encoding a human MSF-derived tribonectin; a biocompatible composition comprising a human tribonectin for inhibiting tissue adhesion formation; and a method of tribonectin for inhibiting tissue adhesion formation; and a method of diagnosing osteoarthritis by measuring the amount of MSF or its fragment in a biological sample of a mammal, wherein an increased amount of MSF compared to a control manual, wherein an increased amount of MSF compared to a control relationectin and DNA encoding it are useful in the treatment of The tribonectin and DNA encoding it are useful in the treatment of such as articulating joints of humans, dogs or horses. The tribonectin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human tribonectin; MSF; megakaryocyte stimulating factor; alternative splicing; joint boundary lubricant; 0-linked oligosaccharide; osteoarthritis; tribosupplementation; tissue adhesion inhibition; friction coefficient reduction; gene therapy; antiarthritic; osteopathic.
                                                                                                                                                                                1141 DETNICNGKPVDGLTTLRNGTLVAFRGHYFWMLSPFSPPSPARRITEVWGIPSPIDIVFT

                                                                                                                                                                                                                                                                                                    172
                                                                                                                                                                                                                                                                                                                             346
  when formulated as a membrane, foam, gel or fibre, is useful for inhibiting adhesion between two surfaces such as the injured tissues of amammal, where the injury is caused by a surgical insertion or trauma, or an artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue DNA encoding a tribonectin may be used in gene therapy. The present sequence represents a substantial portion of a human MSF-derived tribonectin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    440

TLRNGTLVAFRGHYFWMLSPFSPPSPARRITEVWGIPSPIDIVFTRCNCEGKTFFFKDSQ 1122 This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention ; 0 120 623 9 οĘ DAGGAEGETPHMLLRPHVFMPEVTPDMDYLPRVPNQGIIINPMLSDETNICNGKPVDGLT TKKPAPTAPKEPAPTTPKETAPTTPKKLTPTTPEKLAPTTPEKPAPTTPEELAPTTPEEP TKKPAPTAPKEPAPTTPKETAPTTPKKLTPTTPEKLAPTTPEKPAPTTPEELAPTTPEEP TPTTPEEPAPTTPKAAAPNTPKEPAPTTPKEPAPTTPKEPAPTTPKETAPTTPKGTAPTT TPTTPEEPAPTTPKAAAPNTPKEPAPTTPKEPAPTTPKEPAPTTPKETAPTTPKGTAPTT Nucleic acids having the sequences of clones isolated from libraries different human tissues, useful in recombinant DNA methodologies. The polynuclectides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and

1253 LPNVVTSAISLPNIRKPDGYDYYAFSKDQYYNLDVPSRTARAITTRSGQTLSKVWYNCP 1311 This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention ö 173 180 233 293 353 09 οĘ 114 RIKKKPIPKPPVVDEAGSGLDNGDFKVTIPDISTIQHNKVSTSPKITTAKPINPRPSLPP 174 NSDTSKETSLIVNKETTVETKETTTTNKQTSTDGKEKITSAKETQSIEKTSAKDLAPTSK 1 RTKKKPTPKPPVVDEAGSGLDNGDFKVTTPDTSTTQHNKVSTSPKITTAKPINPRPSLPP Nucleic acids having the sequences of clones isolated from libraries different human tissues, useful in recombinant DNA methodologies.
